

Cell Phones - in general

Cell phones are very convenient and it is very difficult in our society to live and to work without them. However, not everything in our society and in everyday life which comes in handy is necessarily good for you or healthy! For example: Fast food, sugary drinks, cell phones, microwave ovens, processed foods, snack-foods, WiFi, electric cars etc.

It is absolutely not "smart" that we work with these so called smart phones. The industry wants you to believe that these devices are "smart", as well as the consumer who uses them. If you were to launch a new brand of cigarettes and call them, "Smart Cigarettes", that still would not make smoking healthier or the smoker more intelligent, would it?

Cell phones are a huge multi-billion dollar business. At this moment there may be 7-8 billion cell phones registered on the planet, greater than the world's population! The numbers are ever increasing. Particularly among teenagers and kids. No provider or mobile phone manufacturer had ever to prove to the health department or any governmental authority that using a cell phone is safe. Because it is NOT SAFE! These companies maximize profits regardless of the health damage and risks to their customers.

In 10 - 20 years our children will ask,
"Why were you so stupid to believe them?"

Cell phones are so dangerous that their use over the next 10 to 15 years possibly may cost the lives of millions of people, including extremely painful conditions such as brain cancer. The newer the phone - the stronger the signal - the bigger and faster will be the potential damage to your health.

A cell phone works on the same wavelength as a microwave oven. The average use of a cell phone in a month is roughly equivalent to sticking your head in the microwave for 1 hour on the highest setting and pushing start. Who would consciously do such a crazy thing? Hopefully no one is stupid enough to kill themselves so horribly, however you probably do not know that you threaten your health in such a way every single time you use the cell phone.

Let's be clear. Cell phone providers know what they are doing. They have executed many secret experiments, such as using pigs to find out how deep the EMF Electro Magnetic Fields penetrate into their skulls. They lightly mention a possible health risk but it is deeply buried in their literature. For example: The operating manual for the iPhone 6 is 196 pages long. And of course, everyone thoroughly reads a 196 page manual, correct ?

Cell Phone - in general

On page 184 (internet only - not in a printed manual) you may find a small a cross-reference and an obscure link that takes you on a webiste journey. As if you would ever go that deep into the manual. It would seem as though they seek to protect themselves from any possible future lawsuits by suggesting you hold the phone away from your body when carrying it or making a call in order not to have any direct contact with your skin! See 2 pages later for details.

Those who advertise and promise that sticking certain products to your cell phone for example will handle the EMF (Electro Magnetic Field) claiming to stop or to reduce EMF, are misleading you.

A cell phone needs an EMF to make it work. Without an EMF you cannot make or receive any calls or data transfers.

If the cell phone does not receive enough "juice" from ONE side of the phone, it will simply pull the EMF needed from the OTHER side of your phone. That could mean even more EMF penetrating into your head!

The human being has a natural electromagentic field of 60 to 90 millivolts of EMF. To stay in good health a person should never be exposed to more than 120 millivolts of EMF. Simply using your cell phone can increase these levels to 2000 millivolts and much higher.

The PROTECT PRO, takes a completely different approach to handling the harmful EMF problem. Now, thanks to the PROTECT PRO technology which was developed over many years - the EMF is converted to a type of frequency that is completely body friendly. A conversion of an evil to a good. Now this is not done by handling the EMF itself, but handling the superior data which is the TORSION FIELD.

Frequencies

Our planet is based on frequencies. There are only 2 types of frequencies.

Good Ones - Pro-Survival

Bad Ones - Counter Survival

Toxic non survival frequencies include: more than 75,000 registered chemicals, EMF from cell phones, Wi-Fi, microwave ovens, computers and computer screens, GMO's, artificial and "natural" flavors, preservatives, fluoride, chlorine, chloramines, chemtrails, Geopathic Zones and many more.

Most of all counter survival products have been developed and inflicted on humanity only over the past 200 years and are "indigestable" by humans, animals, and most of the plantslife and crops.

A better, healthier future can only be achieved by eliminating bad frequencies and / or converting them into good frequencies. And this is one of the main targets of PROTECT PRO.

The future of healing and health is in the use of good frequencies
- not pills or drugs.

Example Manual iPhone 6

Medical conditions

If you have any medical condition that you believe could be affected by iPhone (for example, seizures, blackouts, eyestrain, or headaches), consult with your physician prior to using iPhone.

Repetitive motion

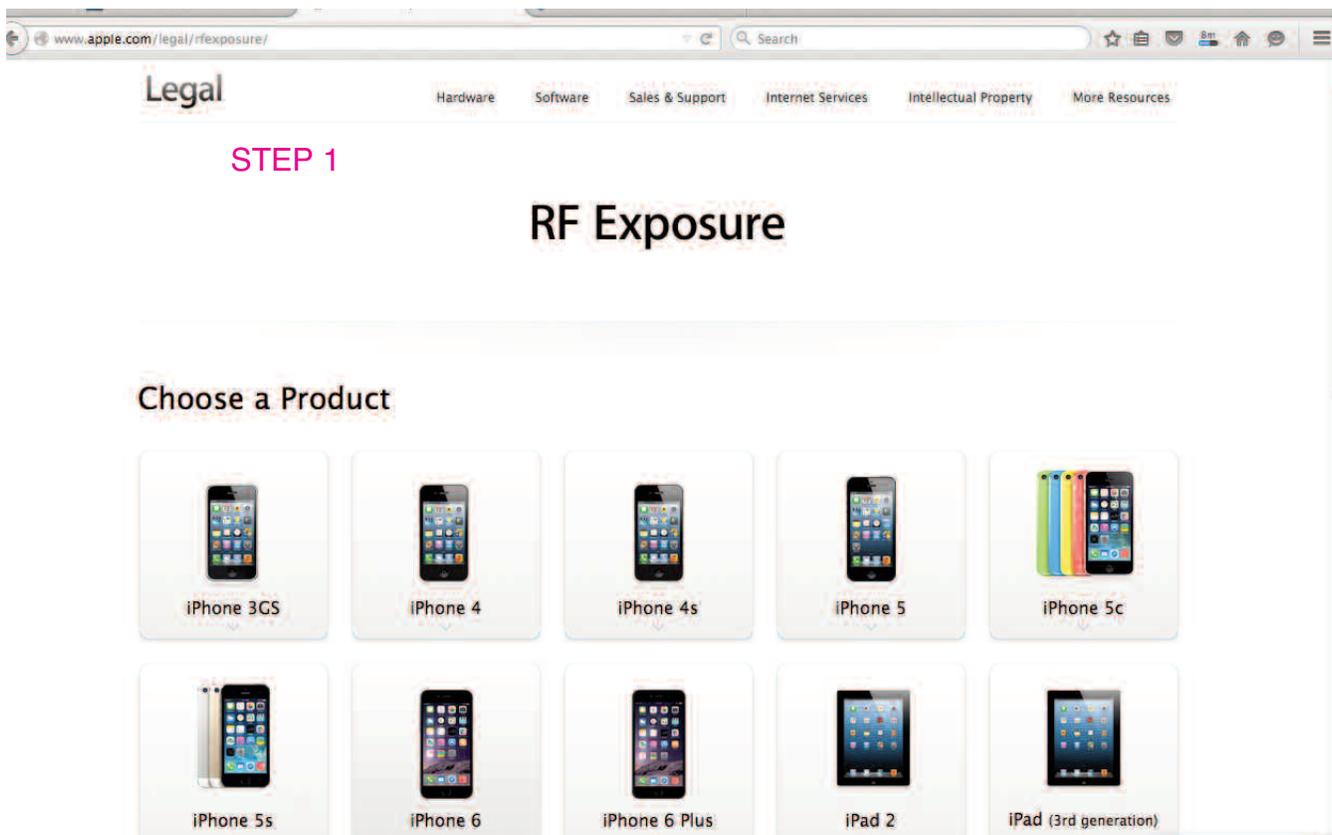

When you perform repetitive activities such as typing or playing games on iPhone, you may experience discomfort in your hands, arms, wrists, shoulders, neck, or other parts of your body. If you experience discomfort, stop using iPhone and consult a physician.

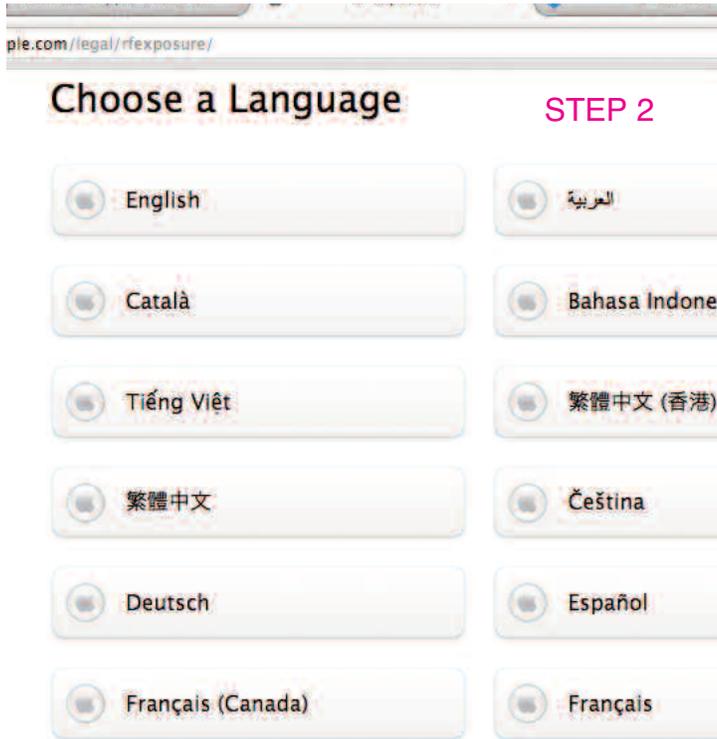

page 184

Radio frequency exposure

iPhone uses radio signals to connect to wireless networks. For information about radio frequency (RF) energy resulting from radio signals and steps you can take to minimize exposure, go to Settings > General > About > Legal > RF Exposure or visit <http://www.apple.com/legal/rfexposure/>

which leads you to STEP 1 STEP 2 STEP 3

SAR Limits

The often quoted SAR limits (Specific Absorption Rate) as shown below were created, designed and written by the mobile phone industry itself to correspond to absolutely nothing (not FDA or Government).

The consumer is led to believe that all is factual and transparent. This could not be further from the truth.

Because of this "flagrant personal foul" the industry deserves an ejection from the game, a suspension for the season without pay, and a significant fine!

But who can do this?

iPhone 6 RF Exposure Information

STEP 3

iPhone has been tested and meets applicable limits for radio frequency (RF) exposure.

Specific Absorption Rate (SAR) refers to the rate at which the body absorbs RF energy. The SAR limit is 1.6 watts per kilogram in countries that set the limit averaged over 1 gram of tissue and 2.0 watts per kilogram in countries that set the limit averaged over 10 grams of tissue. During testing, iPhone radios are set to their highest transmission levels and placed in positions that simulate use against the head, with no separation, and near the body, with 5mm separation.

Depending on the dimensions of the device, additional SAR limits may apply.

To reduce exposure to RF energy, use a hands-free option, such as the built-in speakerphone, the supplied headphones, or other similar accessories. Carry iPhone at least 5mm away from your body to ensure exposure levels remain at or below the as-tested levels. Cases with metal parts may change the RF performance of the device, including its compliance with RF exposure guidelines, in a manner that has not been tested or certified.

Although this device has been tested to determine SAR in each band of operation, not all bands are available in all areas. Bands are dependent on your service provider's wireless and roaming networks.

Model A1549

 SAR Limit	 Body	 Head	 SAR Limit	 Body
1.6 W/kg (Over 1g)	1.14	1.08	2.0 W/kg (Over 10g)	0.97
